

# There is an easier way!

`contextlib.contextmanager`

```
from contextlib import contextmanager
```

```
@contextmanager
def food_context_manager(data):
    print(f"Enter: {data}")
    yield data
    print(f"Exit: {data}")
```

```
with food_context_manager({"dairy": "yuck"}) as data:
    data["fruit"] = "delicious"
```

# A few extra notes

## TODO

- Exceptions in exit
- try / finally in generator context managers
