# Why use context managers?

ThreadPoolExecutor – Good version!

```
data = {  
    "Fruit": "spectacular",  
    "Dairy": "yucky",  
    "Meat": "not cool",  
}
```

*# Spinach is delicious!  
# Fruit is spectacular!  
# Dairy is yucky!  
# Meat is not cool!*

```
def make_a_sentence(noun, adjective):  
    return f"{noun} is {adjective}!"
```
